## The Best Vacation Spots

Who is your intended audience?

My intended audience will be couples or families trying to figure out where to go on vacation in the summer or winter.

What opportunity, problem, or issue is your project addressing?

My website will help users narrow down possible vacation spots or resorts that may interest them and expose them to possible new destinations they may have not heard of. The site will also allow them to select a budget option to further narrow down vacation spots.

What user interactions will your project incorporate?

The user will be able to click through slideshow pictures and select if they are vacationing for a summer or winter area. The user can set a budget range and the website will display destinations within that range. The user can also create a checklist where they can add and remove items that they need to bring.

List at least two related or similar sites found on the Web.

<http://www.tripadvisor.com/Inspiration-g1-c1-World.html>

This website lists out all the travel destinations in one web page.

<http://www.travelchannel.com/interests/travel-tips/photos/top-10-vacation-spots>

This website shows a slide show of potential travel destinations.

<http://www.budgettravel.com/feature/10-best-budget-destinations-for-2015,51558/>

This website also lists out popular destinations and includes videos at the bottom the user can watch.

Resources needed to complete project (external libraries, graphics, webserver, etc.)

The project will need pictures, graphics, and a web server (local for now).

Was this project used in another class? If so, how is the proposed project different?

I have not used this idea in a class before.
